

Leon Oruko

Data & AI Engineer — Data Pipelines, AI Agents & Operational Automation

Nairobi, Kenya · +254 711 223 713 · orukoleon94@gmail.com · [linkedin.com/in/leon-oruko](#) · [github.com/Leooruko](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Data & AI Engineer who builds the pipelines, dashboards, and AI-driven automation that turn hard-to-access operational data into decisions and action. Currently an AI Engineer at PixeSci. Strongest proof: a production loan accountability and intelligence system — ERP-to-PostgreSQL data pipeline, Power BI reporting, a natural-language AI agent, and automated escalation — built solo for a financial services business.

PROJECTS

Brightcom Loan Accountability & Intelligence System

Solo-built · Bright Com Investments Limited · June 2025 – May 2026

- Built an ERP-integrated data pipeline syncing Microsoft Dynamics 365 Business Central into a normalized PostgreSQL database, replacing manual spreadsheet exports with derived views for overdue accounts, arrears, and per-manager performance metrics.
- Delivered Power BI dashboards with role-based access control and trained non-technical staff and managers to use them for daily decisions.
- Designed a natural-language-to-SQL AI agent, live in production, that lets staff query operational data conversationally and triggers automated client/manager reminders and multi-stage escalation, backed by a persistent audit trail.
- After finding a reliability gap where agent answers could contradict the dashboard, currently rebuilding the data-access layer around a verifiable "trust layer" tying every figure to its source query — in development, not yet in production.

isomanagement — ISO 22000 Food Safety Management System

Solo-built, full-stack

Designed and built an ISO 22000 food-safety management system end-to-end — data model, backend API, and frontend — for managing HACCP plans, prerequisite programs, supplier records, and compliance documentation.

EXPERIENCE

AI Engineer — PixeSci

June 2026 – Present

- Ship AI-powered product features by integrating OpenAI and Anthropic APIs into structured, tool-calling agent workflows.
- Build backend services connecting model output to real downstream actions and application logic.
- Orchestrate multi-step AI pipelines coordinating model calls, business logic, and backend services into reliable workflows.
- Evaluate and benchmark emerging LLMs and APIs, documenting implementation tradeoffs for the team.

Data & AI Engineer — Bright Com Investments Limited, Nairobi

June 2025 – May 2026

- Sole engineer for the company's data and AI systems — worked directly with operations and leadership to identify where information was hard to access or reporting was manual (see Projects for the Loan Accountability & Intelligence System built to address this).
- Built and maintained a separate, branded mobile app (React Native) for client, loan, and transaction management, iterating across two backend generations and handling production infrastructure (authentication, SSL/deployment).
- Owned the full stack — data integration, backend, dashboards, and AI tooling — end-to-end.

Data and Machine Learning Contributor — Green Com Enterprise Solutions, Thika Road

2025 – Present

- Explored operational and financial datasets in Python to identify trends and potential fraud indicators, providing recommendations to the business.
- Cleaned client datasets and applied machine learning techniques to identify behavioral patterns; researched applied-AI opportunities for the company.
- Later contracted through Green Com Enterprise Solutions to support data projects for Bright Com Investments Limited, extending the same investigative approach to a related engagement.

Application Developer — Tunyce Media Company, Nairobi

2023 – 2025

- Shipped a TV streaming application to the Google Play Store (Flutter, React Native), building features end-to-end within a cross-functional team and resolving defects affecting stability and UX.

TECHNICAL SKILLS

Data Engineering & Analytics: ETL / Data Pipeline Design, PostgreSQL, Data Modeling, Power BI (Dashboards, Row-Level Security), Predictive Modeling, Machine Learning, Data Preprocessing

AI & LLM Engineering: OpenAI API, Anthropic API, AI Agents, Tool Calling, Natural-Language-to-SQL, Prompt Engineering, Structured Outputs, AI Orchestration, Multi-Model Evaluation

Backend & APIs: FastAPI, Django, REST API Design, Backend Architecture, Workflow Automation

Mobile Development: React Native, Flutter, React

Languages & Tools: Python, SQL, JavaScript, Git, Azure, Jupyter Notebook

EDUCATION

B.Eng., Electrical and Electronics Engineering — Jomo Kenyatta University of Agriculture and Technology | 2024–2029 (in progress)

Data Science Program — Explore AI Academy (2023)

CERTIFICATIONS

ALX Data Science — Certificate of Completion, ALX (powered by ExploreAI Academy), Aug 2024

LANGUAGES

English — Fluent

Spanish — Intermediate reading and listening
